

Drafted claim	Claim kind	Cites	Refusal codes
Case 1 · RNA-seq counts → differential expression → preranked GSEA			
● Treatment T raised a planted gene's expression in these cells	mechanism	fold change (in vitro)	
● T may act through the PLANTED_UP pathway (a hypothesis to test)	mechanism hypothesis	enrichment (prediction)	
⚠ T activates the PLANTED_UP pathway	mechanism	enrichment (prediction)	CLM005
⚠ T may act through it at concentrations reached in patients	mechanism hypothesis	enrichment (prediction)	CLM017
⚠ T improves outcomes in patients	efficacy	enrichment (prediction)	CLM004 CLM005
Case 2 · literature → PaperQA2 passages → typed evidence items			
⚠ 葛根苓连汤 lowers HbA1c in adults with type 2 diabetes (bias unassessed)	efficacy	randomized trial	CLM006
● The same claim, after a reviewer assessed the trial's risk of bias	efficacy	randomized trial	
⚠ The same, in children with type 2 diabetes	efficacy	randomized trial	CLM013 CLM009
⚠ The same, "with no apparent adverse reactions" (未见明显不良反应)	efficacy	randomized trial	CLM019
⚠ Empagliflozin reduced heart-failure hospitalization (passage untyped)	efficacy	untyped passage	CLM002
● Higher serum C-telopeptide was associated with mortality (≥ 65 years)	association	observational	
Case 3 · compound → Open Targets → docking and ADMET			
● Docking suggests 4-aminobenzamidine may bind trypsin (a hypothesis)	mechanism hypothesis	docking	
⚠ 4-Aminobenzamidine inhibits human trypsin-1	mechanism	docking	CLM005
⚠ 4-Aminobenzamidine reduces attacks of hereditary pancreatitis	efficacy	docking	CLM004 CLM005 CLM013 CLM009
⚠ It may bind trypsin at concentrations reached in patients	mechanism hypothesis	docking	CLM017

CLM002 cited item not present · CLM004 clinical claim on prediction only · CLM005 evidence cannot license the claim kind · CLM006 evidence quality blocks it · CLM009 undeclared extrapolation · CLM013 scope is not what the evidence covers · CLM017 human exposure never measured · CLM019 absence never tested
