ModelPlanner
repairs from the codes, a bounded number of times
SIR program
from the model's JSON, a builder or a skill.yaml
1
structure: is this a program? (stops the pipeline on error)
2
method: is the science complete?
3
typecheck: does the evidence license the claims?
4
effects: may this run do that?
5
infoflow: where may these values go?
6
statistics: will the design support the inference?
7
reproducibility: could anyone repeat it?
8
resources: can this run afford it?
refused: code, remedy and location
Lowering to a Plan
the compiler refuses, it never permits
PlanValidator
graph, authority, dataflow, budget, scientific: the whole plan, before any step
AgentLoopController
3 task kinds through the ExecutionBroker
