classified before anything is written
refusal scope: every stage
1 ingest request wrapped; a run policy must lie inside the kernel's
2 classify IngressGateway labels the request
3 policy_ snapshot a frozen policy mints the run's envelope
4 bind task and run written to the WorkGraph
5 plan the request becomes a plan
6 validate_ plan typed plans: the PlanValidator (loop)
7 resolve capabilities resolved for the envelope
8 compile_ context context compiled within the budget
9 preflight approval, budget, loop and egress checks
10 execute the model call, through the broker
11 capture_to_ quarantine output held; its label is a join
12 ingest_ evidence sources become evidence records
13 verify claims checked; rejections recorded
14 release_gate the OutputGate; the only release
15 commit_ validated_state verified claims to memory
16 checkpoint the run's completion audited
quarantine: the output is held and cannot be read
released before anything is committed
Refused at the stage it stopped
EgressDenied, VerificationFailed, BudgetExhausted, ApprovalRequired, CapabilityUnavailable, StuckLoop, PolicyDenied; the quarantined output is refused, run_refused audited
Completed
released output; verified claims committed; run_completed audited
