The model proposes
explanations and a catch-all (prior ≥ 0.05); analyses with costs; predictions, sealed before any run
64 steps reached?
yes
Stop
provisional or undetermined
no
catch-all ≥ 0.50?
yes
New explanations
carved from the catch-all
no
leader ≥ 0.95?
yes
tested and replicated?
no
yes
Run the next analysis
a severe test (≥ 0.8) or replicate the leader owes; else the most information per unit cost (≥ 0.01 bits), or stop
Accept the leader
wording capped by the licensing table, not the posterior
Observe and update
Bayes on the sealed predictions only; a design that cannot license a claim kind leaves it fixed
